

## **Feeding Strategies to Utilize both a Hybrid of US Sun-cured and Dehydrated Alfalfa for Maximum Performance and Lowest Cost Ration**

Sumantra Sengupta

(Al Dahra Inc., Bakersfield, USA)

**Abstract:** Our research shows that utilizing a blending technique for Forage will yield better performance and optimize the return on investments for various types of Forage products in the ration. This method is used in many other parts of the world by large Dairy farmers and has been proven to be successful. Additionally, we will also discuss other feed commodity usages that are allowing for milk yield gains of 10 – 15% globally.
